

HEP C INFORMATION FOR GYPSIES AND TRAVELLERS

There is a **cure** for Hep C, and even if you don't have symptoms, it can **protect you** from liver damage or liver cancer.

Hep C is a virus that can be spread through **blood-to-blood** contact.

Sharing dirty **clippers, razors, tattoo** and **piercing** equipment, or even toothbrushes can **spread Hep C**.

For a **quick** and **private** test, speak to the **Prison Healthcare Team!**

Reinfection rates can be quite high, so make sure to get **re-tested!**
